BECAUSE MAKING TIME IS THE HARDEST PART

Classroom training is invaluable, but to ensure true preparedness nothing can top hands on training. Unfortunately, making time for busy staff to travel to a facility can be impossible for many companies. That's why ISTS now offers this incredible mobile training experience!

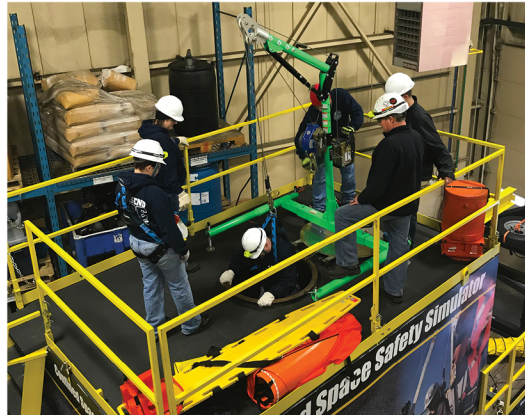

Patient Packing and Medical Evaluation are essential skills to an effective confined space rescue team.

CONFINED SPACE TRAINING. WHEREVER YOU ARE.

Each year, an estimated 2.1 million workers must enter confined spaces and expose themselves to risk of injury or even fatality. And over 60% of deaths in confined space work are Rescuers, as a result of lack of comprehensive training, improper equipment or poor procedures. In addition to our classroom courses, ISTS offers on-site training exercises to help ensure compliance with 29 CFR 1910.146.

COMPREHENSIVE TRAINING FOR ALL LEVELS

Designed to properly prepare Entrants, Attendants, Supervisors and Rescuers, the safety training exercises available through our 12' x 8' x 8' simulated confined space mobile unit will prepare your team to respond to an incident more quickly and competently than local emergency responders. Our training exercises are scientifically designed to get participants mentally engaged, encourage creative problem solving and foster a positive team attitude.

WE'VE DONE THIS BEFORE. MANY TIMES

The ISTS team brings more than 100 years of experience in ERT training to help your team prepare for the worst case scenario. We'll bring our expertise to your site (in all 50 states!), to help make sure an incident doesn't turn into a tragedy.

CONFINED SPACE TRAINING COURSES FROM ISTS:

- Entrant, Attendant and Supervisor (8 Hours)
- Initial Rescue Level (24-40 Hours)
- Rescue Level Refresher (8 Hours)

RELATED SERVICES:

- Confined Space Hazard Assessments
- Competent Person Fall Protection Inspections
- Lockout/Tagout Procedures
- Regulatory Compliance Auditing
